

# Lecture 3 More Basic HTML and CSS

SE-805 Web 2.0 Programming (supported by Google)

http://my.ss.sysu.edu.cn/courses/web2.0/

School of Software, Sun Yat-sen University

#### Outline

- More HTML Elements
- More Basic CSS
- CSS in practice

#### Web Page Metadata: <meta>

- Name
  - Author
  - Description
  - Keywords
  - Generator
  - Revised
- Http-equiv
  - Content-type
  - Expires
  - Refresh

#### Table: , , , , <caption>

```
Smart Guys 

>name 
>gender 

>Bill 
male 

Susan 
female 

HTML
```

#### **Smart Guys**

output

#### Never use Table for layout~!

#### Definition List: <dl>, <dt>, <dd>

**dl** represents a list of definitions of terms(*block*) **dt** represents each term, and **dd** its definition

```
<dl>
    <dl>
        <dd><dt>newbie </dt><dd>one who does not have mad skills </dd>
        <dd></dd>
        <dd></dd>
        <dd></dd>
        <dd></dd>
        <dd></dd>
        <dd></dd>
        <dd></dd>
        <dd></dd>
        <dd></dd>
        </dd>
        </dd>
        </dd>
        #TML
```

```
newbie
one who does not have mad skills
own
to soundly defeat (e.g. I owned that newbie!)
frag
a kill in a shooting game
```

#### Quotations: <blockquote>

#### A lengthy quotation (block)

```
As Lincoln said in his famous Gettysburg Address:
<blockquote>
Fourscore and seven years ago, our fathers brought forth on this continent a new nation, conceived in liberty, and dedicated to the proposition that all men are created equal.
</blockquote>
HTML
```

#### As Lincoln said in his famous Gettysburg Address:

Fourscore and seven years ago, our fathers brought forth on this continent a new nation, conceived in liberty, and dedicated to the proposition that all men are created equal.

#### Inline Quotations: <q>

#### A short quotation (inline)

Quoth the Raven, <q>Nevermore.
HTML
Quoth the Raven, "Nevermore".

- Why not just write the following?
  - Quoth the Raven, "Nevermore."
- We don't use " mark for two reasons:
  - XHTML shouldn't contain literal quotation mark characters; they should be written as "
  - Using <q> allows us to apply CSS styles to quotations

#### HTML Character Entities

A way of representing any Unicode character within a Web page

character (s)	entity
<>	< >
é è ñ	é è ñ
TM ©	™ ©
πδΔ	π δ Δ
И	И
" &	" &

- Complete list of HTML entities
- How would you display the text & amp; on a web page?

## HTML-encoding Text

```
<p&gt; &lt;a
href="http://google.com/search?q=marty&ie=utf-
8&aq=t"> Search Google for Marty </a&gt; &lt;/p&gt;
HTMI
```

<a href="http://google.com/search?q=marty&ie=utf-8&aq=t"> Search Google for Marty </a>

output

 To display the link text in a Web page, its special characters must be encoded as shown above

#### Computer Code: <code>

## **Code**: a short section of computer code (usually rendered in a fixed-width font)

```
The <code>ul</code> and <code>ol</code> tags make lists.
```

The ul and ol tags make lists.

#### Preformatted Text:

#### A large section of pre-formatted text (block)

```
Steve Jobs speaks loudly reality distortion
Apple fans bow down

Steve Jobs speaks loudly reality distortion
Apple fans bow down

output
```

- Displayed with exactly the whitespace / line breaks given in the text
- Shown in a fixed-width font by default
- How would it look if we had instead enclosed it in code tags?

#### Outline

- More HTML Elements
- More Basic CSS
- CSS in practice

## Grouping Styles

```
p, h1, h2 {
   color: green;
}
h2 {
   background-color: yellow;
}
```

This paragraph uses the above style.

This h2 uses the above style.

- A style can select multiple elements separated by commas
- The individual elements can also have their own style (like h2 above)

## CSS Properties for Text

Property	Description
text-align	alignment of text within its element
text-decoration	decorations such as underlining
line-height, word-spacing, letter-spacing	gaps between the various portions of the text
text-indent	indents the first letter of each paragraph
Complete list of text properties	

## text-align

```
blockquote { text-align: justify; }
h2 { text-align: center; }

The Emperor's Quote

[TO LUKE SKYWALKER] The alliance... will die. As
will your friends. Good, I can feel your anger. I am
unarmed. Take your weapon. Strike me down with all
of your hatred and your journey towards the dark
side will be complete.
```

 text-align can be left, right, center, or justify (which widens all full lines of the element so that they occupy its entire width)

#### text-decoration

```
text-decoration: underline;

This paragraph uses the style above.
```

- Can also be overline, line-through, blink, or none
- Effects can be combined:
  - text-decoration: overline underline

## The list-style-type Property

#### ol { list-style-type: upper-roman }

CSS

- Possible values: none : No marker
  - disc (default), circle, square
  - II. decimal: 1, 2, 3, etc.
  - ul. decimal-leading-zero: 01, 02, 03, etc.
  - IV. lower-roman: i, ii, iii, iv, v, etc.
  - v. upper-roman : I, II, III, IV, V, etc.
  - vi. lower-alpha: a, b, c, d, e, etc.
  - vII. upper-alpha: A, B, C, D, E, etc.
  - vIII. lower-greek : alpha, beta, gamma, etc.
  - ix. Others: hebrew, armenian, georgian, cjk-ideographic, hiragana, katakana, hiragana-iroha, katakana-iroha

#### Outline

- More HTML Elements
- More Basic CSS
- CSS in practice

### **Body Styles**

body { font-size: 16px; }

CSS

- To apply a style to the entire body of your page, write a selector for the body element
- Saves you from manually applying a style to each element

## Cascading Style Sheets

- It's called Cascading Style Sheets because the properties of an element <u>cascade</u> together in this order:
  - Browser's default styles
  - External style sheet files (in a <link> tag)
  - Internal style sheets (inside a <style> tag in the page's header)
  - Inline style (the style attribute of the HTML element)

## Inheriting Styles

```
body { font-family: sans-serif; background-color: yellow; }
p { color: red; background-color: aqua; }
a { text-decoration: overline underline; }
h2 { font-weight: bold; text-align: center; }

This is a heading.

A styled paragraph. Previous slides are available on the web site.

• a bulleted list

output
```

- When multiple styles apply to an element, they are inherited
- A more tightly matching rule can override a more general inherited rule
- Not all properties are inherited (notice link's color above)

## Styles that Conflict

```
p, h1, h2 { color: blue; font-style: italic; }
h2 { color: red; background-color: yellow; } css

This paragraph uses the first style above.

This heading uses both styles above.
```

 When two styles set conflicting values for the same property, the latter style takes precedence (later we will learn about more specific styles that can override more general styles)

#### W3C CSS Validator

```
<a href="http://jigsaw.w3.org/css-validator/check/referer"> HTML
<img src="http://jigsaw.w3.org/css-validator/images/vcss" alt="Valid CSS!" /> </a>
```

- jigsaw.w3.org/css-validator/
- It checks your CSS to make sure it meets the official CSS specifications
- More picky than the web browser, which may render malformed CSS correctly

## CSS Properties for Backgrounds

Property	Description
background-color	color to fill background
background-image	image to place in background
background-position	placement of bg image within element
background-repeat	whether/how bg image should be repeated
background-attachment	whether bg image scrolls with page

## background-image

```
background-image: url("images/draft.jpg");

CSS

This is the first paragraph

This is the second paragraph...

It occupies 2 lines and the second paragraph the second paragraph...

draft.jpg
```

Background image/color fills the element's content area

## background-repeat

```
body {
    background-image: url("images/draft.jpg");
    background-repeat: repeat-x;
}

Css

This is the first paragraph

This is the second paragraph...

It occupies 2 lines
```

Can be repeat (default), repeat-x, repeat-y, or no-repeat

## background-position

```
body {
   background-image: url("images/draft.jpg");
   background-repeat: no-repeat;
   background-position: 370px 20px;
}

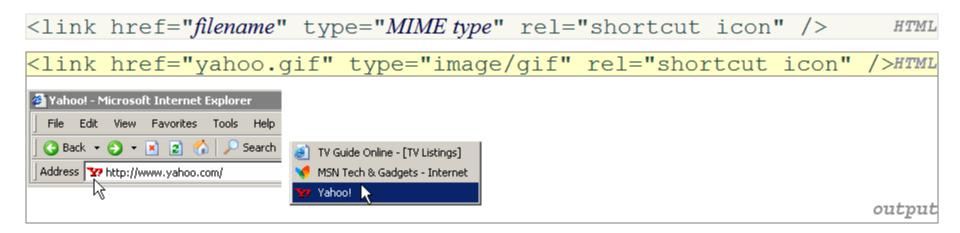

This is the first paragraph

This is the second paragraph...

It occupies 2 lines
```

- Value consists of two tokens, each of which can be top, left, right, bottom, center, a percentage, or a length value in px, pt, etc.
- Value can be negative to shift left/up by a given amount

## Favorites Icon ("favicon")

- The link tag, placed in the HTML page's head section, can specify an icon for a Web page.
- IE6: this doesn't work; must place a file in .ico format named favicon.ico in the root directory of the Web server (<u>instructions</u>)

#### Summary

#### More HTML Elements

- meta
- dl, dt, dd
- blockquote, q
- HTML character entities, HTML-encoding text
- code, pre

#### More Basic CSS

- Grouping style
- Comments
- Text properties: text-align, text-decoration
- list-style-type

#### Summary

- CSS in practice
  - body styles
  - Cascading vs. inherit
  - Conflict resolve
  - W3C CSS validator
  - Background properties: background-image, backgroundrepeat, background-position
  - Favorites icon

#### Exercises

- List definitions all html tags and css properties we learned this course in a web page with explanations of their purposes and usages
  - dl, dt, dd for definitions
  - blockquote, q for quoted sentences from <u>w3 school</u>
  - code, pre for examples
  - Applying style with a standalone css file

## Further Readings

- http://en.wikipedia.org/wiki/XHTML
- http://en.wikipedia.org/wiki/Cascading\_Style\_Sheets
